

Information Security Management Systems

Would your business be able to continue trading if you lost critical data?

Have you assessed the risks to your business?

Are your insurance premiums rising?

Do you know what assets are on your site?

Would loss of information damage your reputation ?

Do you want to stand out and show clients that your committed to improvement?

BS7799 is a standard that defines a broad range of security controls and best practice. This guides an organisation on the necessary steps required in establishing a management framework that encompasses the people, the IT system and the processes within your organisation.

There are several good reasons to implement BS7799

- Industry "best practice" for security.
- Good marketing.
- If your business is subject to DPA regulations, then BS7799 compliance will enforce your organisations practice of due diligence.
- Improved efficiency and understanding of business risk.
- Increase the level of information security within your organisation.
- Identification and protection of your assets.

BS7799 is the only method that specifically addresses the protection of information and provides detailed guidelines on how a secure management framework should be implemented.

BS7799 is becoming a de-facto standard for the protection of information security assets. Any organisation implementing BS7799 will have a robust system and demonstrate to clients that they care about Information Security.

RPW Systems can help you implement BS7799 and create a system that will

- Define a Security policy that provides management direction and support for information security.
- Help you identify your assets and appropriately protect them.
- Reduce the risks of human error, theft, fraud or misuse of facilities.
- Help prevent unauthorised access, damage and interference to business premises and information.
- Control access to information and ensure that security is built into information systems.
- Implement business continuity management that will counteract interruptions to business activities and to protect critical business processes from the effects of major failures or disasters.
- Will help avoid breaches of any criminal and civil law, statutory, regulatory or contractual obligations, and any security requirement .
- Implement a set of business processes that will control your Information Security Management System.

Company Profile

RPW Systems help people improve their business performance through the implementation of management standards and process improvement.

RPW Systems have over a decade of experience working with both large and small companies across Europe with staff trained by BSI or Lloyds.

We are based in the East Midlands and primarily work with SME's to provide robust solutions that are both business driven and cost effective.
